EDUCATION

Department of Computer Science and Eng., The Ohio State University
Ph.D. candidate in Computer Engineering   Fall 2013 − Present
Perception and Neurodynamics Laboratory (PNL)
Supervisor: Professor DeLiang Wang

School of Electrical and Computer Engineering, University of Tehran
B.Sc. in Computer Engineering   Fall 2008 − Spring 2013

RESEARCH INTERESTS

Monaural Speech Enhancement	Automatic Speech Recognition
Speech Dereverberation	Deep Learning
Microphone Array Speech Processing	Statistical Machine Learning

COMPUTER SKILLS

- *Programming languages*: expert in C/C++, MATLAB, and Python and proficient in Java and Unix shell script.
- *Machine learning toolboxes*: expert in Tensorflow and familiar with HTK, Keras, and PyTorch.
- *Other skills*: experienced in Git and LaTeX.

RESEARCH EXPERIENCE

Graduate Research:

- Feature study for two-talker speech separation in reverberant conditions:

  - Utilized parallel computation and GPU servers on the Ohio Supercomputing Center to perform large-scale DNN training for speech separation.
  - Studied a wide range of acoustic-phonetic features and designed novel feature combinations based on feature selection methods.

- DNN-based two-talker separation algorithm:

  - Designed and implemented a two-talker separation algorithm.
  - Deployed a development set to optimize the performance of the DNN by studying regularization methods and network architectures.
  - Collaborated with the Speech Psychoacoustics Laboratory at the Department of Speech and Hearing Science to perform speech intelligibility tests on human listeners.
  - Performed statistical analysis on the test results and reported substantial intelligibility improvement for hearing-impaired listeners.

- Designed and implemented a two-stage DNN to perform joint dereverberation and speech denoising.
- Investigated two-talker speaker identification in reverberant mixtures.
- Studied microphone array methods for dereverberation of simulated and recorded reverberant speech signals.
- Collaborated with lab members to study open-set speaker separation methods:

  - Successfully implemented deep clustering, deep attractor network, and permutation invariant training algorithms.
  - Utilized distributed computation over a grid of nodes and GPU servers to perform data parallelism in Tensorflow.
  - Studied the generalization of the algorithms to reverberant conditions.

- Performed pitch-tracking and speech segmentation based on the techniques in Computational Auditory Scene Analysis (CASA) using Java.

- Evaluated the effects of augmenting object detection into visual question answering (VQA) algorithms.
- Studied transfer learning in the reinforcement learning framework (ongoing project).

Undergraduate research:
- (B.Sc. Thesis) Designed and implemented a decision tree to classify learning styles of toddlers, using the ECLS-K dataset provided by the U.S. Department of Education (Supervisor: Dr. Maryam S. Mirian).
- Proposed a knowledge-based approach for the disaster management process.

PROFESSIONAL EXPERIENCE

Reviewer:
- IEEE/ACM Transactions on Audio, Speech, and Language Processing
- Speech Communication

Graduate Teaching Assistant, The Ohio State University:
- Modeling and Problem Solving with Spreadsheets and Databases   Spring 2017
- Modeling and Problem Solving with Spreadsheets and Databases   Spring 2014
- Foundations I: Discrete Structures   Fall 2013

Undergraduate Teaching Assistant, University of Tehran:
- Design and Analysis of Algorithms   Spring 2012
- Discrete Mathematics   Spring 2012
- Artificial Intelligence   Fall 2011

PUBLICATIONS AND PRESENTATIONS

Journal papers:
